Change The Way You Sell
Transforma el rol tradicional del Punto de Venta

IPOS Places Customers at the Core of your Business

Customers today
Know technology, dominate mobile devices, know what they want, and most often are more knowledgeable than staff in store.
On impulse purchases they require quality, price and delivery time. They are always in a hurry and want to shop in the shortest time possible. They like to interact with their retail systems from their mobile devices, quickly and transparently.
Though oriented to self-service shopping, personalized treatment is of utmost importance to them.

The New World of Mobile POS
Mobility and mobile devices based on the web are revolutionizing the traditional POS (Point Of Sale) scenario worldwide.
The big chains are seeking for solutions. The mobile POS has quickly become a necessity for the retail and other industries, in which customer service is key.

Changing the POS Role
IVAN has transformed the role of traditional POS software—mostly composed of different physical components with separate modules that interact among themselves—into a revolutionary, customer satisfaction (not administrative oriented) solution.
All of this is made possible without being tied to a specific mobile operating system.

IPOS, a Development Built Differently
IVAN makes all this possible by integrating all components into one unit. It has been conceptualized and developed as a web application software, with all its benefits and advantages—such as remote access from any desktop or mobile device with a web browser that supports HTML 5 (regardless of the operating system).

IPOS consists of the following components:
- IPOS (Internet Point Of Sale)
- Mobile POS System
- Database server
- Catalog Import / Export Mechanisms

Epson OmniiLink TM-T88V-DT printer
IPOS is installed and runs on the Epson OmniiLink TM-T88V-DT intelligent printer which contains a powerful website server for web pages, and a Windows enhanced PC.
It is an intelligent printer that includes Epson ePOS technology which meets the requirements of all printing services, regardless the type of device requesting a print function.

Wireless Communications
IPOS creates IPOS Cloud, its own local Wifi communications hot Spot (Hub).
Basic configuration includes an external Access Point, which creates the IPOS CLOUD.

Today, Mobility Places the Customer at the Core of Any Business.
IPOS will undoubtedly change the image of your business—and will impact both your customers and your competition.

IPOS is a registered trademark of IVAN ORGANIZACIÓN. OmniiLink TM-T88V-DT is a registered trademark of Epson.
